

Compare Center Spread and an Outlier: Apply and Create

Use the matching sheet ID when checking answers.

Use what you learned to explain, construct or apply an idea.

1. Which center better represents the cluster of short times here? Explain.

Look for:

- Connects a center choice to the distribution.

One possible response: The median 3 better describes the cluster because 18 pulls the mean upward.

2. Should a large value automatically be removed?

Look for:

- Does not discard inconvenient data without a reason.

One possible response: No; investigate whether it is valid and relevant before removing it.

Open responses use criteria and an illustrative response. Other well-supported responses can be acceptable.
