

Parts of a Plant & Their Functions

Use the matching sheet ID when checking answers.

Match each plant part on the left with its important job on the right. Write the matching letter in the box.

1. Roots — Underground system → Absorbs water and minerals from the soil and anchors the plant firmly in the ground.
2. Stem — Main stalk → Supports the plant upright and carries water and nutrients up from the roots.
3. Leaves — Green flat parts → Catches sunlight to make food (photosynthesis) for the plant.
4. Flower — Colorful blossoms → Produces pollen and seeds to help the plant reproduce.
5. Seeds — Found inside fruit → Contains young plant embryos that will grow into new plants.
