

Parts of a Plant & Their Functions

Name: _____ Date: _____

Match each plant part on the left with its important job on the right. Write the matching letter in the box.

1. Roots — Underground system → _____
2. Stem — Main stalk → _____
3. Leaves — Green flat parts → _____
4. Flower — Colorful blossoms → _____
5. Seeds — Found inside fruit → _____

Choices: A. Catches sunlight to make food (photosynthesis) for the plant. · B. Absorbs water and minerals from the soil and anchors the plant firmly in the ground. · C. Contains young plant embryos that will grow into new plants. · D. Supports the plant upright and carries water and nutrients up from the roots. · E. Produces pollen and seeds to help the plant reproduce.
