

Planet Order and Model Limits: Apply and Create

Name: _____ Date: _____

Use what you learned to explain, construct or apply an idea.

Eight planets

From the Sun outward, the planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. The Sun is a star. A list shows order but not true distances or sizes.

1. Which is farther outward in this order: Uranus or Neptune?

2. Does equal spacing in a planet list mean actual planet distances are equal?
